Ansible ini file example.

```
Ansible ini file example.

You are reading an unmaintained version of the Ansible documentation. Unmaintained versions can contain unfixed security vulnerabilities (CVE). Please upgrade to a maintained version. See the latest Ansible documentation. Synopsis Notes Examples Status Synopsis† INI file based inventory, sections are groups or group related with special :modifiers. Entries in sections (group_1) are hosts, members of the group. Hosts can have variables defined inline as key/value pairs separated by =. The children modifier indicates that the section contains groups. The vars modifier indicates that the section contains variables assigned to members of the group. Anything found outside a section is considered an 'ungrouped' host. Values passed in using the key-value syntax are interpreted as Python literal structure (strings, numbers, tuples, lists, dicts, booleans, None), alternatively as string. For example var=False would create a string equal to 'FALSE'. Do not rely on types set during definition, always make sure you specify type with a changes. Another option would be to use the yaml form for inventory source which processes the values correctly. example: <?xml><host>host1 ansible_port=222 [web:vars] http_port=8080</host> # all members of 'web' will inherit these myvar=23 [web:children] # child groups will automatically add their hosts to parent group apache mygroup1 ansible_port=3444 # specific var will override group vars host1 ansible_port=0?#password # supports & to prevent var clashes [nginx:vars] java_port=8080</nginx> # all members of 'nginx' will inherit java_port from parent [nginx]<host>host2 ansible_port=4444 host3 ansible_port=127.0.0.1</host> # same host as above, but member of 2 groups, will inherit vars from both [host]<host>host4 ansible_port=127.0.0.1</host> # same host as above, but member of 2 groups, will inherit vars from both [host]<host>host5 ansible_port=4445 [g1] host1 [g2] host4 # same host as above, but member of 2 groups, will inherit vars from both [host]<host>host6 ansible_port=4446 [g1] host2 [g2] host5 #
